

Signs with Smart Connectivity for Better Road Safety

Team ID - PNT2022TMID54258

Sprint Goals :

1. Push data from local code to cloud

Code Flow :

Program Code :

> [weather.py](#)

This file is a utility function that fetches the weather from OpenWeather API. It returns only certain required parameters of the API response.

Python code

```
import requests as reqs
```

```
def get(myLocation,APIKEY):
```

```

    apiURL =
f"https://api.openweathermap.org/data/2.5/weather?q={myLocation}&appid={APIKEY}"
    responseJSON = (reqs.get(apiURL)).json()
    returnObject = {
        "temperature" : responseJSON['main']['temp'] - 273.15,
        "weather" : [responseJSON['weather'][_]['main'].lower() for _ in
range(len(responseJSON['weather']))],
        "visibility" : responseJSON['visibility']/100, # visibility in percentage
where 10km is 100% and 0km is 0%
    }
    if("rain" in responseJSON):
        returnObject["rain"] = [responseJSON["rain"][key] for key in
responseJSON["rain"]]
    return(returnObject)

```

> publishData.py

This code pushes data to the cloud and logs data. IBM Cloud is configured such that the data is displayed in the following

```

# Python code

# IMPORT SECTION STARTS

import wiotp.sdk.device # python -m pip install wiotp
import time

# IMPORT SECTION ENDS
# -----
# API CONFIG SECTION STARTS

myConfig = {
    "identity" : {
        "orgId" : "vmgyh4",
        "typeId" : "Ibm",
        "deviceId" : "2801"
    },
    "auth" : {
        "token" : "?gaDKd?YEPQHqg@D"
    }
}

# API CONFIG SECTION ENDS
# -----
# FUNCTIONS SECTION STARTS

def myCommandCallback(cmd):
    print("recieved cmd : ",cmd)

def logData2Cloud(location,temperature,visibility):
    client = wiotp.sdk.device.DeviceClient(config=myConfig,logHandlers=None)
    client.connect()
    client.publishEvent(eventId="status",msgFormat="json",data={
        "temperature" : temperature,
        "visibility" : visibility,
        "location" : location
    },qos=0,onPublish=None)

```

```

client.commandCallback = myCommandCallback
client.disconnect()
time.sleep(1)

```

```
# FUNCTIONS SECTION ENDS
```

[> brain.py](#)

This file is a utility function that returns only essential information to be displayed at the hardware side and abstracts all the unnecessary details. This is where the code flow logic is implemented.

```

from datetime import datetime as dt
from publishData import logData2Cloud as log2cloud

# IMPORT SECTION ENDS
# -----
# UTILITY LOGIC SECTION STARTS
def processConditions(myLocation,APIKEY,localityInfo):
    weatherData = weather.get(myLocation,APIKEY)

    log2cloud(myLocation,weatherData["temperature"],weatherData["visibility"])

    finalSpeed = localityInfo["usualSpeedLimit"] if "rain" not in weatherData else
localityInfo["usualSpeedLimit"]/2
    finalSpeed = finalSpeed if weatherData["visibility"]>35 else finalSpeed/2

    if(localityInfo["hospitalsNearby"]):
        # hospital zone
        doNotHonk = True
    else:
        if(localityInfo["schools"]["schoolZone"]==False):
            # neither school nor hospital zone
            doNotHonk = False
        else:
            # school zone
            now = [dt.now().hour,dt.now().minute]
            activeTime = [list(map(int,_.split(":")) for _ in
localityInfo["schools"]["activeTime"])]
            doNotHonk = activeTime[0][0]<=now[0]<=activeTime[1][0] and
activeTime[0][1]<=now[1]<=activeTime[1][1]

    return({
        "speed" : finalSpeed,
        "doNotHonk" : doNotHonk
    })

# UTILITY LOGIC SECTION ENDS

```

[> main.py](#)

The code that runs in a forever loop in the micro-controller. This calls all the util functions from other python files and based on the return value transduces changes in the output hardware display.

```
# Python code
```

```

# IMPORT SECTION STARTS

import brain

# IMPORT SECTION ENDS
# -----
# USER INPUT SECTION STARTS

myLocation = "Chennai,IN"
APIKEY = "02b79757ba32d53f08b146132b7d8eb8"

localityInfo = {
    "schools" : {
        "schoolZone" : True,
        "activeTime" : ["7:00","17:30"] # schools active from 7 AM till 5:30 PM
    },
    "hospitalsNearby" : False,
    "usualSpeedLimit" : 40 # in km/hr
}

# USER INPUT SECTION ENDS

Images :

The image shows a Visual Studio Code editor window with a dark theme. The Explorer sidebar on the left displays a project structure for 'IBM' under 'Project Development Phase > Sprint 2'. The file 'main.py' is selected. The main editor area shows the code for 'main.py', which includes a dictionary for 'hospitalsNearby' and 'usualSpeedLimit', a comment indicating the start of micro-controller code, and a while loop that prints the results of 'brain.processConditions'. The terminal at the bottom shows the execution of 'python main.py', with logs indicating successful connections and disconnections to the IBM Watson IoT Platform.

```
